MSE / V (reference unit)
mean beats mirror: YES, sibling: YES (lower = closer)

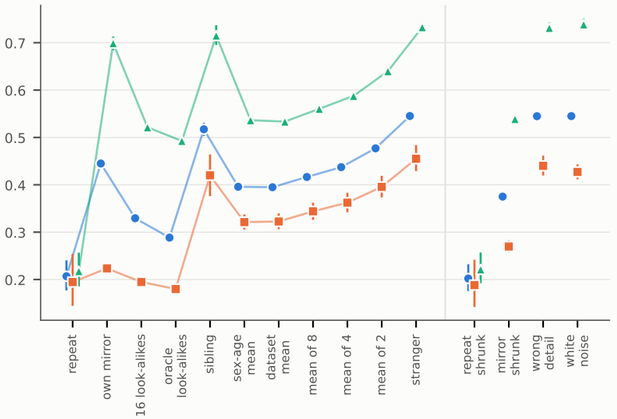

MSE
mean beats mirror: YES, sibling: YES (lower = closer)

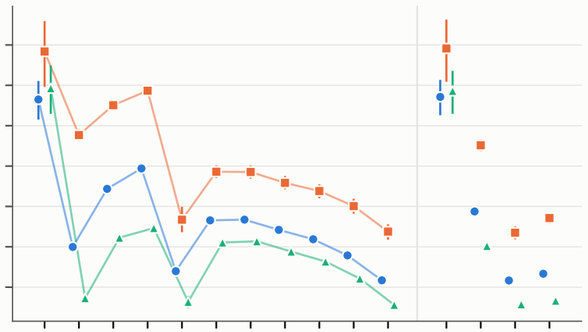

RMSE
mean beats mirror: YES, sibling: YES (lower = closer)

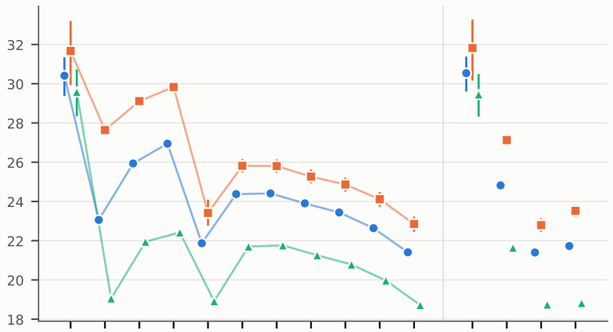

MAE
mean beats mirror: YES, sibling: YES (lower = closer)

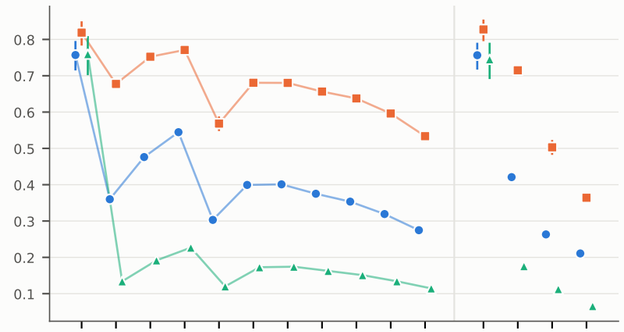

PSNR (dB)
mean beats mirror: YES, sibling: YES (higher = closer)

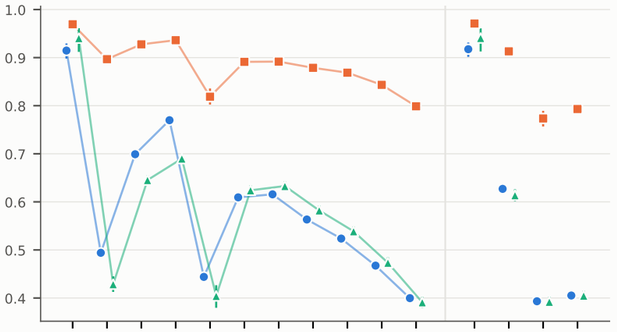

PSNR, fixed range (dB)
mean beats mirror: YES, sibling: YES (higher = closer)

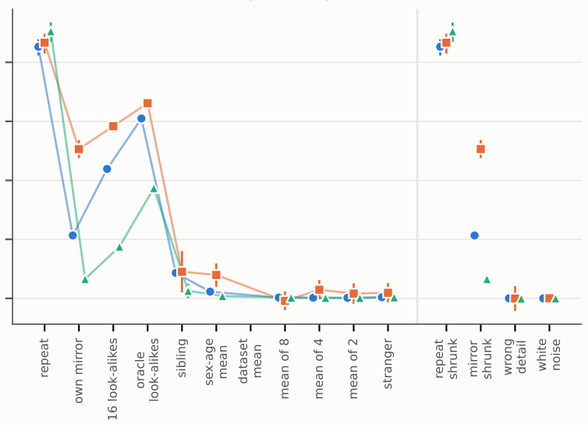

SSIM
mean beats mirror: YES, sibling: YES (higher = closer)

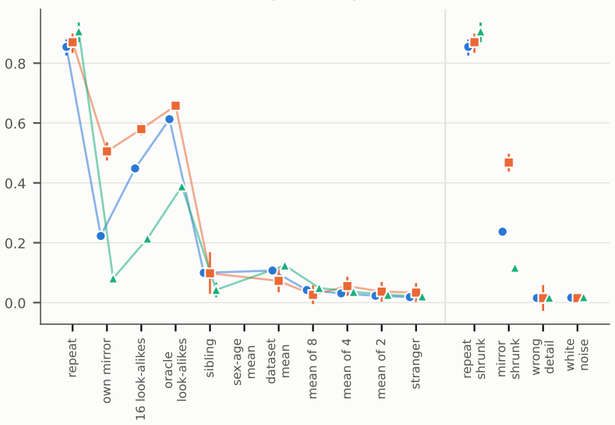

Pearson r
mean beats mirror: YES, sibling: YES (higher = closer)

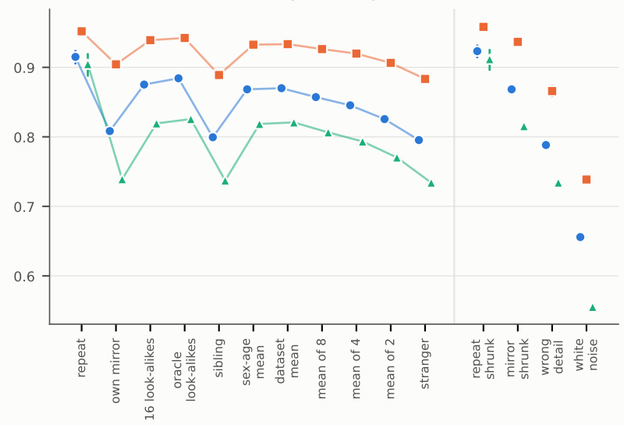

ACC vs dataset mean
mean beats mirror: n/a, sibling: n/a (higher = closer)

ACC vs sex-age mean
mean beats mirror: no, sibling: YES (higher = closer)

IDDT-like
mean beats mirror: YES, sibling: YES (higher = closer)

QTIM, both hemispheres
- 32 random cubes, 16 mm
- deep box
- parietal box

Points: mean over targets; bars: 95% interval (bootstrap over families). Right of the line: controls built from the truth. 'Mean beats' compares the dataset mean with the mirror and the sibling on the random cubes (YES = the metric rewards averaging).
pre-QC: affine registration only, MRI registration gate not met (results/registration/status.md)
